DETAILED ACTION

Claims

Claims 1-3, 5-8, 13-14, 16, and 19 are amended.

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, relevant prior art of record did not disclose, alone or in combination, a back light unit in a liquid crystal display as claimed comprising: a light-guide plate; and a light input device for directing light substantially to a rear side of said light input device in a direction away from the light guide plate prior to directing said light to a front side thereof and toward the light guide plate to obtain high focusing of said light, wherein substantially all of said light is directed through a substantially non-solid medium, prior to being directed toward said light guide plate.

The closest combination is Applicant's admitted prior art in view of Matsushita et al (Matsushita) USPAT 6,317,177 B1, disclosing a light-guide with a substantially indirect reflective light input device and light source (lower configuration in Figure 1 of Matsushita). However, a significant amount of the light from source, 4, directly illuminates an end-portion of the light guide plate, 3, contrary to the claimed invention.

No other reference was found, with motivation to combine, to teach the claimed configuration wherein substantially all of said light is directed through a substantially non-solid medium, prior to being directed toward said light guide plate.

FIG. 1

As to claim 19, relevant prior art of record did not disclose, alone or in combination, a back light unit in a liquid crystal display as claimed comprising: a light-guide plate; and a light input device for directing a light path from a light source toward the light-guide plate, wherein the light from the light source is passed through the light input device to be incident into the light-guide plate without being incident directly to the

light-guide plate, wherein substantially all of said light is directed through a substantially non-solid medium, prior to being directed toward said light-guide plate.

The closest combination is Applicant's admitted prior art in view of Matsushita et al (Matsushita) USPAT 6,317,177 B1, disclosing a light-guide with a substantially indirect reflective light input device and light source (lower configuration in Figure 1 of Matsushita). However, a significant amount of the light from source, 4, directly illuminates an end-portion of the light guide plate, 3, contrary to the claimed invention. No other reference was found, with motivation to combine, to teach the claimed configuration wherein substantially all of said light is directed through a substantially non-solid medium, prior to being directed toward said light guide plate.

As to claims 2-18, they are directly or indirectly dependent upon claim 1 with allowable subject matter above.

References cited but not applied are relevant to the instant Application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
